he's back on the job

He survived heart attack and is back on the job because coronary care units, new drugs, and advanced methods of rehabilitation are helping doctors restore more cardiacs to productive life. Most victims survive first heart attacks and, of those who do, four out of five now go back to work.

Heart scientists predict even greater heart-saving advances in the foreseeable future, provided funds are increased for research, education and community service. Help make these predictions come true.

GIVE... so more will live HEART FUND
